

GLOBAL BALANCED DOLLAR FEEDER FUND

Minimum disclosure document (fact sheet) as at 30 September 2017

Investment objectives & strategy

To invest in a USD hedged share class of the Ashburton Investments SICAV - Global Balanced Fund, a sterling based fund, which aims to deliver medium to long-term capital growth through a balanced asset allocation across a diversified range of asset classes, regions and currencies with at least 30% of its assets in a combination of fixed income securities, Money Market Instruments and cash whilst not exceeding 60% of its assets in equity securities.

Investor profile

This Fund is designed as a moderate risk strategy for clients who are prepared to accept a moderate degree of risk with their capital.

Fund activity

- The oil theme returned in terms of portfolio activity during the month, with oil being the best performing global major asset. We have been active shifting our oil-linked portfolio exposures depending on where we have found the most value on a cross-asset basis. Our oil-linked FX outperformed strongly and have since taken profits. Presently, we have shifted our portfolio exposure into energy stocks that, within our framework, have the biggest risk premium relative to other oil-linked assets.
- The US administration outlined its tax cut reform. This, coupled with a re-pricing of the odds for a December hike, caused a sharp move higher in USD. As we wrote at the end of July, expectations were extremely low and positioning in USD extremely short, making us more constructive on the dollar. We capitalised on the dollar move by further adjusting our FX portfolio exposures.
- Sterling was the notable out-performer during a strong USD month, as the BOE shifted more hawkish. We are currently pricing in just under 2 hikes over the next 12 months; this pricing might seem fair from a financial stability concerns standpoint, but, if materialised, it would accelerate the downside risks to the UK macro cycle.
