Definitions

Total return:	Total return accounts for two categories of return: income and capital appreciation. Income includes interest paid by fixed income investments, distributions or dividends. Capital appreciation represents the change in the market price of an asset.
NAV (net asset value):	This is the total value of assets in the portfolio less any liabilities, divided by the number of shares outstanding.
TER (total expense ratio):	This is a measure of the total costs associated with managing and operating an investment fund. These costs consist primarily of management fees and additional expenses such as trustee and custody fees, auditor fees and other operational expenses. The total cost of the fund is divided by the fund's total assets to arrive at a percentage, which represents the TER.
Index:	In the case of financial markets, an index is a theoretical portfolio of assets representing a particular market or a portion of it. Each index has its own calculation methodology and is usually expressed in terms of a change from a base value. Thus, the percentage change is more important than the actual numeric value.
Transaction costs:	Total costs incurred by the investor in buying and selling the underlying assets of a financial product and is expressed as a percentage of the daily NAV calculated on an annualised basis. These costs include brokerage, VAT, and trading costs.
Annualised cost:	Is the cost per year of investing in the assets of a financial product.
Annualised return:	This is the average rate earned by the investment over a year in the period measured.
Tracking error:	A measure of the amount of risk that is being taken in excess of the benchmark.

Ashburton Investments is a registered trading name of Ashburton (Jersey) Limited. A money market portfolio is not a bank deposit account. whether the price of a participatory interest is a marked-to-market value or targeted at a constant value. Whether the price of a participatory interest is a marked-to-market value or targeted at a constant value. The total return to the investor is made up of interest received and any gain or loss made on any particular instrument; and that in most cases the return will merely have the effect of increasing or decreasing the daily yield, but that in the case of abnormal losses it can have the effect of reducing the capital value of the portfolio; how the yield is calculated, that excessive withdrawals from the portfolio may place the portfolio under liquidity pressures; and that in such circumstances a process of ring-fencing of withdrawal instructions and managed pay-outs over time may be followed. A feeder fund is a portfolio that invests in a single portfolio of a collective investment scheme, which levies its own charges, and which could result in a higher fee structure for the feeder fund. In the event a potential investor requires material risks disclosures for the foreign securities included in a portfolio, the manager will upon request provide such potential investor with a document, outlining potential constraints on liquidity & repatriation of funds; Macroeconomics risk; Political risk; Foreign Exchange risk; Tax risk; Settlement risk; and Potential limitations on the availability of market information. The value of participatory interests and the income from them may go down as well as up and is not guaranteed. Past performance is not necessarily a guide to the future performance. Where an investment involves exposure to a currency other than that in which it is denominated, changes in rates of exchange may cause the value of the investment to go up or down. CIS portfolios are traded at ruling prices and can engage in borrowing and scrip lending. A full detailed schedule of fees, charges and commissions is available from Ashburton on request and incentives may be paid and if so, would be included in the overall costs.
