

CHINDIA EQUITY FUND I SHARE CLASS

Minimum disclosure document (fact sheet) as at 28 February 2018

Investment objectives & strategy

To achieve long-term capital growth through equity or equity related investments predominantly in the stock-markets of China and India. The Fund focuses on the quality and attractiveness of individual companies rather than the outlook for particular markets. The Fund also invests in companies traded in other markets where a significant proportion of growth in their underlying business is set to derive from China or India.

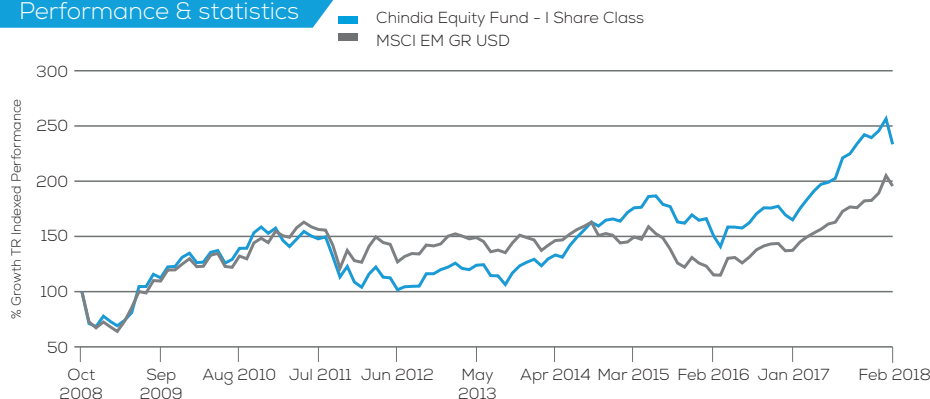

Investor profile

This Fund offers the potential for higher returns and is suitable for investors with a more aggressive attitude to risk.

Fund activity

- Global equity markets witnessed a heightening of volatility and negative stock market returns as the macro outlook appeared to worsen, despite the micro economic factors turning incrementally more positive.
- The key development from China was the unexpected Party Congress meeting held in Beijing during the final week of the month which included the announcement by state media that the Party wants to abolish term limits for the State President and Vice President.
- Our China market model seeks to provide timely buy and sell signals, on balance, through cycles. With the return of volatility and accompanying choppy markets, the model has been busier than usual. We received a fresh 'sell' signal in the early part of February leading to an allocation shift to move the China country allocation to a modest underweight position.
- The Indian GDP data for the quarter ended December 2017 surprised on the upside, with a reading of 7.2%, ahead of consensus and the full year has also been estimated to be better than forecast.
