

ASHBURTON EURO ASSET MANAGEMENT FUND I CLASS

Minimum Disclosure Document as at 31 May 2021

Investor profile

This Fund is suitable for an investor looking to achieve long-term growth of capital, accepting a low to moderate degree of risk.

Investment objectives and strategy

This Fund aims to achieve an increase in value whilst suppressing volatility and risk, through a conservative allocation of assets between, primarily, international equities, fixed interest securities and cash or money market instruments. Exposure to equities is limited to a maximum of 50% and exposure to fixed income securities is limited to a maximum of 70%. Exposure to currencies, other than base currency, after hedging, will not exceed 50%.

Performance and statistics

Source: Morningstar®, Ashburton Investments

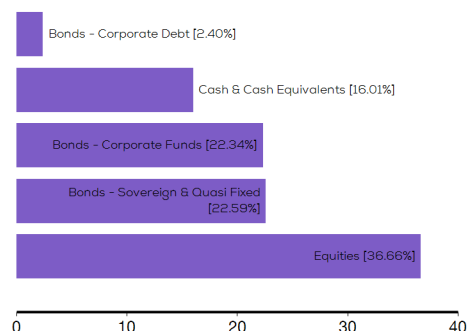

The investment performance is for illustrative purposes only and is calculated on a bid to bid basis and does not take any initial fees into account. Income is reinvested on the ex-dividend date. Actual performance will differ based on the initial fees applicable, the actual investment date and the date of reinvestment of income. Past performance is not necessarily an indication of future performance.

Definitions

Total return:	Total return accounts for two categories of return: income and capital appreciation. Income includes interest paid by fixed income investments, distributions or dividends. Capital appreciation represents the change in the market price of an asset.
NAV (net asset value):	This is the total value of assets in the portfolio less any liabilities, divided by the number of shares outstanding.
TER (total expense ratio):	This is a measure of the total costs associated with managing and operating an investment fund. These costs consist primarily of management fees and additional expenses such as trustee and custody fees, auditor fees and other operational expenses. The total cost of the fund is divided by the fund's total assets to arrive at a percentage, which represents the TER.
Index:	In the case of financial markets, an index is a theoretical portfolio of assets representing a particular market or a portion of it. Each index has its own calculation methodology and is usually expressed in terms of a change from a base value. Thus, the percentage change is more important than the actual numeric value.
Transaction costs:	Total costs incurred by the investor in buying and selling the underlying assets of a financial product and is expressed as a percentage of the daily NAV calculated on an annualised basis. These costs include brokerage, VAT, and trading costs.
Annualised cost:	Is the cost per year of investing in the assets of a financial product.
Annualised return:	This is the average rate earned by the investment over a year in the period measured.
Tracking error:	A measure of the amount of risk that is being taken in excess of the benchmark.

Disclaimer
