

Ashburton Global Leaders Zar Equity Feeder Fund (A)

Minimum Disclosure Document as at 31 July 2025

The MDD covers the purposes of providing a general investor report.

Investor profile

This Fund is designed for investors wishing to participate in capital markets and may be most appropriate for investors with a long-term investment horizon, as losses may occur due to high market fluctuations.

Investment objectives and strategy

The objective of the Ashburton Global Leaders ZAR Equity Feeder Fund is to maximize risk-adjusted returns over the longterm while preserving capital, regardless of market conditions by investing in companies whose primary source of income is from, or whose major assets are based in countries worldwide. The Ashburton Global Leaders ZAR Equity Feeder Fund will apart from assets in liquid form, consists solely of participatory interests in the Global Leaders Equity Fund which in turn invests principally in quoted large cap equity securities around the world.

Performance and statistics

Source: Morningstar®, Ashburton Fund Managers

All performance numbers are net of all fees and expenses. The above is purely for illustrative purposes. The above portfolio performance is calculated on a NAV to NAV basis and does not take any initial fees into account. For reinvesting funds, income is reinvested on reinvestment date. Actual investment performance will differ based on the initial fees applicable, the actual investment date, the date of reinvestment of income and dividend withholding tax. Past performance is not necessarily an indication of future performance.

The above meet the criteria for the display of a statement of changes in the composition of the portfolio.

The fund adhered to the policy objectives as stated in the Supplemental Deed in terms of it's allowed investments.

Definitions

Total return:	Total return accounts for two categories of return: income and capital appreciation. Income includes interest paid by fixed income investments, distributions or dividends. Capital appreciation represents the change in the market price of an asset.
NAV (net asset value):	This is the total value of assets in the portfolio less any liabilities, divided by the number of shares outstanding.
TER (total expense ratio):	This is a measure of the total costs associated with managing and operating an investment fund. These costs consist primarily of management fees and additional expenses such as trustee and custody fees, auditor fees and other operational expenses. The total cost of the fund is divided by the fund's total assets to arrive at a percentage, which represents the TER.
Management fee :	A management fee is a charge levied by an investment manager for overseeing an investment fund.
Performance fee :	A performance fee is a payment made to an investment manager for generating positive returns. This is as opposed to a management fee, which is charged without regard to returns.
Index:	In the case of financial markets, an index is a theoretical portfolio of assets representing a particular market or a portion of it. Each index has its own calculation methodology and is usually expressed in terms of a change from a base value. Thus, the percentage change is more important than the actual numeric value.
Transaction costs:	Total costs incurred by the investor in buying and selling the underlying assets of a financial product and is expressed as a percentage of the daily NAV calculated on an annualised basis. These costs include brokerage, VAT, and trading costs.
Annualised cost:	Is the cost per year of investing in the assets of a financial product.
Annualised return:	The weighted average compound growth rate over the performance period measured.
Tracking error:	A measure of the amount of risk that is being taken in excess of the benchmark.
Total investment charges (TIC) :	It is the sum of the Total Expense Ratio (TER) and the Transaction Cost (TC)
Highest & Lowest Return:	The highest and lowest rolling twelve-month performance of the portfolio since inception.
Sharpe Ratio:	The ratio of excess return over the risk-free rate divided by the total volatility of the portfolio.
Sortino Ratio:	The ratio of excess return over the risk-free rate divided by the downside deviation of the portfolio.
Standard Deviation:	The deviation of the return of the portfolio relative to its average.
Drawdown:	The greatest peak to trough loss until a new peak is reached.
Information ratio :	The information ratio measures the risk-adjusted performance of a portfolio relative to a benchmark.

Disclaimer

Ashburton Management Company (RF) (Proprietary) Limited (Reg No 1996/002547/07) ("Ashburton") is an approved collective investment schemes manager of the Ashburton Collective Investment Scheme "Ashburton CIS". Ashburton is regulated by the Financial Sector Conduct Authority (FSCA) and is a full member of the Association for Savings and Investment SA (ASISA). This document and any other information supplied in connection with the Ashburton CIS is not "advice" as defined and/or contemplated in terms of the Financial Advisory and Intermediary Services Act, 37 of 2002 "the FAIS Act" and investors are encouraged to obtain their own independent advice prior to buying participatory interests in CIS portfolios issued under the Ashburton CIS. Any investment is speculative and involves significant risks and therefore, prior to investing, investors should fully understand the portfolios and any risks associated with them. Collective investment schemes in securities are generally medium to long term investments. In the event a potential investor requires material risks disclosures for the foreign securities included in a portfolio, the manager will upon request provide such potential investor with a document outlining: potential constraints on liquidity & repatriation of funds; Macroeconomics risk; Political risk; Foreign Exchange risk; Tax risk; Settlement risk; and Potential limitations on the availability of market information. The value of participatory interests may go down as well as up and past performance is not necessarily a guide to the future. Forward pricing is used and portfolio valuations take place at approximately 15h00 (14h00 for money market funds) each business day (17h00 at month and quarter end). Instructions to redeem or repurchase must reach Ashburton before 14h00 (11h00 for money market funds) to ensure same day value. For money market and short term debt portfolios the price of each participatory interest is aimed at a constant value. While a constant price is maintained the investment capital or the return of a portfolio is not guaranteed. The total return to the investor is primarily made up of interest received but may also include any gain or loss made on any particular instrument. In most cases this will merely have the effect of increasing or decreasing the daily yield, but in extreme case, e.g. defaults by underlying issuers, it can have the effect of reducing the capital value of the portfolio. Feeder fund is a portfolio that invests in a single portfolio of a collective investment scheme, which levies its own charges and which could result in a higher fee structure for the feeder fund. Excessive withdrawals from the portfolio may place the portfolio under liquidity pressures. In such circumstances a process of ring-fencing of withdrawal instructions and managed pay-outs over time may be followed. CIS portfolios are traded at ruling prices and can engage in borrowing and scrip lending. Fluctuations or movements in exchange rates may cause the value of underlying investments to go up or down. A CIS portfolio may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. Participatory interests are calculated on a net asset value (NAV) basis, which is the total market value of all assets in the portfolio including any income accruals and less any permissible deductions from the CIS portfolio divided by the number of participatory interests in issue. All fees quoted are inclusive of VAT. The Total Expense Ratio (TER) is expressed as an annualised percentage of the charges, levies and fees incurred by the portfolio related to its management, for the period under review against the average NAV of the portfolio over this period. A higher TER does not necessarily imply a poor return, nor does a lower TER imply a good return. The current TER cannot be regarded as an indication of future TERs. A full detailed schedule of fees, charges and commissions is available from Ashburton on request and incentives may be paid and if so, would be included in the overall costs. Ashburton Fund Managers (Pty) Ltd is an authorised Financial Services Provider.
