Ashburton Stable Income Fund (A)

Minimum Disclosure Document as at 31 October 2025

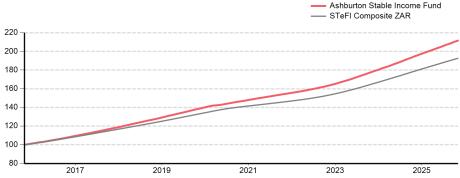

The MDD covers the purposes of providing a general investor report.

This fund is suited for investors looking for a short to medium term investment for assets that require a higher return than cash and money market funds while at the same time require a high degree of capital stability. This portfolio has only low duration fixed income exposure resulting in far less volatility than more aggressively mandated portfolios and in turn the probability of a long-term capital loss is extremely low.

Investment objectives and strategy

The Ashburton Stable Income Fund is an actively managed cash fund which is designed to deliver returns that are higher than that of a traditional money market unit trust fund. This fund differs from a money market fund due to the fact that the investment manager is able to invest in income generating instruments with a longer maturity than that of a traditional money market fund. The Fund will comply with regulations governing retirement funds. The investment objective of the portfolio is to maximise the current level of income within the restrictions set out in the investment policy, while providing high stability of capital. The portfolio will aim to achieve performance returns in excess of money market yield and current account yields. Risks include political, economic, interest rate risk, default risk as well as general market risk which could lead to an increase in bond yields and credit risk.

Performance and statistics

Source: Morningstar®, Ashburton Fund Managers

All performance numbers are net of all fees and expenses. The above is purely for illustrative purposes. The above portfolio performance is calculated on a NAV basis and does not take any initial fees into account. For reinvesting funds, income is reinvested on reinvestment date. Actual investment performance will differ based on the initial fees applicable, the actual investment date, the date of reinvestment of income and dividend withholding tax. Past performance is not necessarily an indication of future

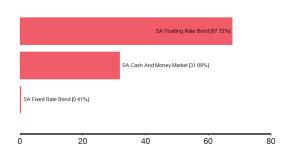

Growth (%)	Fund	Benchmark	Fund statistics	Fund	Benchmark

The above meet the criteria for the display of a statement of changes in the composition of the portfolio.

The fund adhered to the policy objectives as stated in the Supplemental Deed in terms of it's allowed investments.

Definitions

NAV (net asset value):

TER (total expense ratio):

Total return accounts for two categories of return: income and capital appreciation. Income includes interest paid by fixed income investments, distributions or Total return: dividends. Capital appreciation represents the change in the market price of an asset

This is the total value of assets in the portfolio less any liabilities, divided by the number of shares outstanding.

This is a measure of the total costs associated with managing and operating an investment fund. These costs consist primarily of management fees and additional

expenses such as trustee and custody fees, auditor fees and other operational expenses. The total cost of the fund is divided by the fund's total assets to arrive at a percentage, which represents the TER.

Management fee : A management fee is a charge levied by an investment manager for overseeing an investment fund.

A performance fee is a payment made to an investment manager for generating positive returns. This is as opposed to a management fee, which is charged without Performance fee :

In the case of financial markets, an index is a theoretical portfolio of assets representing a particular market or a portion of it. Each index has its own calculation Index: methodology and is usually expressed in terms of a change from a base value. Thus, the percentage change is more important than the actual numeric value

Total costs incurred by the investor in buying and selling the underlying assets of a financial product and is expressed as a percentage of the daily NAV calculated Transaction costs: on an annualised basis. These costs include brokerage, VAT, and trading costs

Annualised cost: Is the cost per year of investing in the assets of a financial product.

Annualised return: The weighted average compound growth rate over the performance period measured.

Tracking error: A measure of the amount of risk that is being taken in excess of the benchmark. Total investment charges (TIC): It is the sum of the Total Expense Ratio (TER) and the Transaction Cost (TC) Highest & Lowest Return: The highest and lowest rolling twelve-month performance of the portfolio since inception.

Sharpe Ratio: The ratio of excess return over the risk-free rate divided by the total volatility of the portfolio. Sortino Ratio: The ratio of excess return over the risk-free rate divided by the downside deviation of the portfolio.

Standard Deviation: The deviation of the return of the portfolio relative to its average. The greatest peak to trough loss until a new peak is reached.

Information ratio: The information ratio measures the risk-adjusted performance of a portfolio relative to a benchmark.
